(a) both effects shrink, selection far faster
deployable
paired gap (points)
correction
selection
points below dense accuracy
(b) read where you would ship: 21 checkpoints, 3 families
backward elim.
target vs span
OMP vs magnitude
select vs merge
refit (vs magn.)
refit (vs merge)
6/10
20/25
12/16
22/24
16/16
24/24
residual term / $\|Y\|_F$
gap at the frontier (points)
(c) same ordering with no accuracy: 154 layer-budget cells
correction
selection
ratio
fraction of units kept, M/N
