Attention heads, matched head counts
MNLI matched accuracy (%)
multiplier α (heads = round(round(αd)/64))
magnitude
magnitude_ls
omp
omp_ls
random_ls
span_ls
Targeted selection matters when there are few units
to choose among, and not when there are many
OMP minus spanning (points)
multiplier α
attention heads (12 units per block)
FFN neurons (3072 per block), mean +0.08
